I have started my career as a java developer in 2020.

While working across the **Java Technology Stack** i have developed applications using various Spring Boot Modules and also frontend JS frameworks like Angular and React.

I have worked closely with the product owners and business analysts to understand the requirements

I have also used devops tools like Maven,Git , Docker and Kubernetes.

I have the knowledge of various AWS Components such as EC2 ,S3 ,EKS,ELB, EBS, SNS, Cloudwatch to deploy our apps to the cloud.

I have worked in agile environment and have followed scrum practices

I am a **Continuous Learner** and i have recently learnt creating serverless projects using AWS Lambdas

I also **Like Sharing** what i learn and i do it through my youtube channel and blog
